ENDA Energie

- **Vision:**

Societies in which people are self-reliant and resilient, have access to sustainable energy services and effective citizen control over natural resources

- **Mission:**

Accompany the populations in the processes of transformation towards a sustainable development.

- **Axes :**

1. *Access of vulnerable communities to sustainable energy services*
2. Enhancing empowerment and resilience to *climate change and desertification / Sustainable environment*
3. *Sustainable Development and green economy through Inclusive and citizen Governance of Natural Resources*

«Transforming lives while preserving the planet»

Objectives of ACEWA and Justification

Objectives of the project

Strengthen the implementation of regional policies and strategies on access to sustainable energy in West Africa for the most disadvantaged

- Promote the integration and implementation of these regional strategies into national strategies
- Contribute to the ownership of these policies and strategies at the national level
- Important to have tools and organize advocacy messages

INFORSE-West AFRICA
International Network for Sustainable Energy

SustainableEnergy

Context

- More and more RE projects in WA: AIRE, SE4ALL
- Interest of foreign investors for the potential of RE
- Respond to the need for access; target of the 35% mix in 2020; fight against climate change; ODD7
- Probable acceleration of the trend
- **Problem:** Social impact for people: skilled jobs; access to energy; regulation on independent producers; land protection; etc.
- Environmental and Social Impact Assessments (ESIA): lack of monitoring of Environmental and Social Management Plans (ESMP)

ACEWA Project: just and sustainable transition

- Urgency to find just and lasting answers for the most disadvantaged / local residents
- Initiate dialogues on local content in project countries
- Identify examples of good practices to promote
- Share experiences of taking into account the social dimension
- Determine an approach for an inclusive, just and sustainable response

Results of Preliminary Dialogues

Some orientations and recommendations (Senegal)

- Identification of good practices
- Need for wider and inclusive local governance
- Establishment of a quality control system and impact monitoring, including for ESMPs
- Provision of impact monitoring tools based on the SDGs
- Training of sellers / installers and maintenance staff; reach a critical mass of skilled technicians
- Hold public consultations with decentralized services
- Reflect on the best approach to land allocation and compensation that benefits all
- Elaboration of a Guide for local governments backed by the SDGs

Thanks!
