

## THE GAME:

**Kyogami is a board game suitable for families.**

It was tested and tuned to two publics:

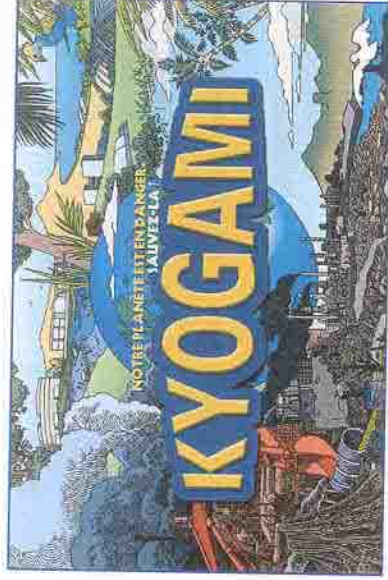

- children from 10 years and over and their parents,
- adults having a wish to understand the basic features of the Kyoto Protocol.

**Within each box a booklet is enclosed**, providing information on the greenhouse gas effect, climate change and the Kyoto Protocol. In this booklet, after the play, interested players will be able to find some references of books and web sites to help them deepen their knowledge.

The booklet suggests **alternative rules** designed to experiment the many facets of the Kyoto Protocol. Kyogami also enables players to grasp the main targets of the Protocol by assessing after each game the economical growth and the environmental benefits which were achieved.

*The web site will give players more information on the game.*

*It will provide advices, answers to questions and new ideas for alternative rules.*

## HOW TO BUY KYOGAMI?

Kyogami will be on sale in game shops from 15 September 2005.

For the purchase of 4 or more boxes, contact the publisher. Special sale terms are agreed starting from the purchase of 12 boxes.

## MAKE KYOTO A GAME

*Fighting climate change will remain a major issue all along the 21<sup>st</sup> century. An approach through a game complements other tools to make adults and children more aware of this issue.*

Buy or sell CO<sub>2</sub> quotas, clean up your plant before your competitors do, become the cleanest entrepreneur... The exciting aspects of the Kyoto Protocol have been translated into a board game, Kyogami.

The game is based on the use of tradable quotas as a new kind of money, enabling players to reduce progressively greenhouse gas emissions.
